

CSC252: Computer Organization

# Lecture 0 - Introduction

A red underline consisting of two horizontal lines, the top one being longer and slightly curved, and the bottom one being shorter and straight.

Prof. Diana Diazh  
(she/her/hers)  
University of Arizona  
Spring 2025

# WELCOME!

We are very excited to introduce you to the amazing world of computer organization

# Lecture 0: Overview

Today we'll discuss:

1. Syllabus
2. How to store data in a computer?

So we can understand:

1. Classroom rules and responsibilities
2. Prerequisites for this course

# Introductions

# About me

Associate Professor of Practice  
Diana Diazh, MS, PhD  
(she/her/hers)

[ddiana@cs.arizona.edu](mailto:ddiana@cs.arizona.edu)

<https://www.linkedin.com/in/dianadiazh/>

My Office: Gould-Simpson 835

## Teaching experience:

- Computer Design
- Machine Organization
- Data Science
- Database systems
- Python
- OOP
- Bioinformatics I
- ...

Call me Diana or Prof. Diazh (/ "DEE"+ "az"/)

## Research interests:

- Data Science
- CS education
- Bioinformatics
- Finance
- Sustainability

# About your classmates (127 students enrolled)

Thanks for filling out the survey about expectations!

Please read the "Grading Scale and Policies" from last year's syllabus <https://drive.google.com/file/d/18bPVK-ys...hanges to the course Grading Scale and Policies?>  
71 responses

# Teaching Assistants

- What do they do?
  - Help answer questions in the classroom and the class question/answer forum (Discord)
  - Hold office hours (Gould Simpson Building - room 813)
  - Grade your assignments
  - Help grade tests
  - Act as a “point of contact” for course questions, grading, and help in understanding concepts covered

# About our TAs

Valerie  
Militeeva  
(Course  
Coordinator)

Chitragada  
Juneja (CCIT)

Ellie Laton  
(Sr. TA)

Jesse Oved

Asadkhon  
Rasulov

Akbarali  
Sodikov

Bryan Wang

Ameya  
Madhugiri

- TA Introductions!
  - Advice for students, Interesting Programming Project, Unpopular opinion, or Favorite CS topic

# Our Values

- Probably you will not understand everything right away - it will take a few tries
- This is an inclusive space - diverse voices will make us stronger, let's be respectful
- The future of CS is in this room
- We embrace (and encourage) failure.

**You belong here.**

# Part of first assignment

- Attend office hours next week
- I'll send the details over Discord

# What is CSC252?

---

- Prerequisites

- CSC 210
- Familiarity with Java

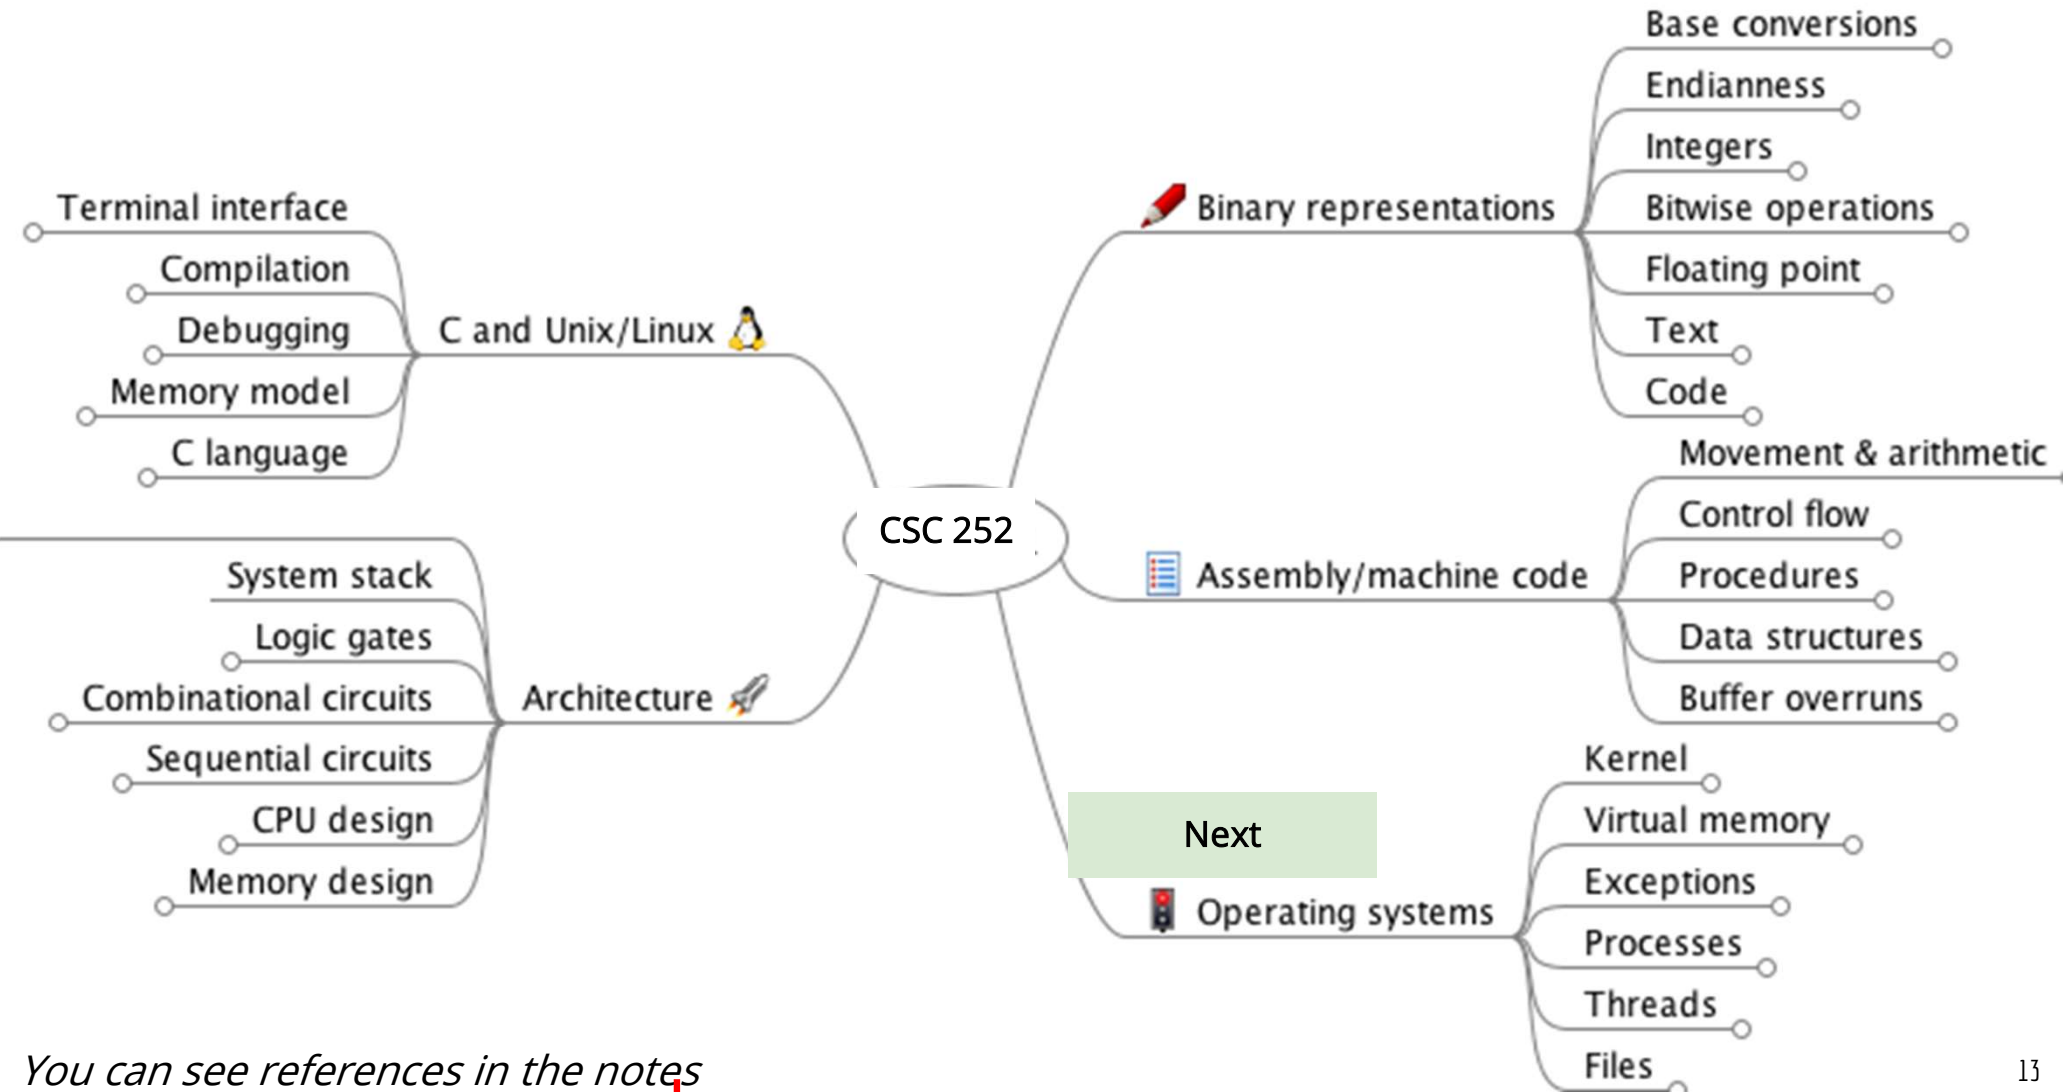

- Key Topics

- Assembly language (MIPS)
- CPU design (logic, ALUs, pipelining, cache)
- Some C

# We will look under the computer “hood”

# Curriculum

*You can see references in the notes*

# Key Websites

---

- Class homepage <https://profdiazh.github.io/csc252/>
  - syllabus, lectures, assignments posted here
- Questions: [Discord server](#) managed by Tas
  - sign up and use your name or netid
- Grades: <http://d2l.arizona.edu>
- Reading: Zybooks
- Submit assignments: Gradescope

# Grading Breakdown

5%	zyBooks Readings	drop 1 week	50 points
24%	Assembly Projects	drop 1 asm	240 points
21%	Simulation Projects	drop 1 sim	210 points
5%	Homework assignments - exam prep	drop 1 homework	50 points
30%	Tests	worst replace with final	300 points
15%	Final		150 points

# Online Textbook

---

- **Required Readings**
  - Open from d2l
  - You can access for free for 30 days
  
- Activities are embedded in the textbook
  - See the zyBooks website for the due dates
  - Reading a head of time will help you prepare for lecture

# Exams

---

- Tests

- Every 2 weeks (6 total)
- 30 minutes long
- Stay for lecture afterwards

- Final Exam

- Wednesday, May 14,
- From 6:00 to 8:00 pm

- All exams:

- Closed book and notes
- No calculators
- No make-up

# Homework

---

- Homework assignments help you study for the test
  - Due at 5pm, 2 days **before** the test
  - Turn in through Gradescope
  - Will be checked for completion, not graded for correctness
- Group work **encouraged**
- But everybody must turn in their own copy

# Projects

---

- Due on Wednesday at 7 pm, most weeks
  - TAs will stop helping at 5pm
  - Turn in to Gradescope
  - Some projects focus on writing assembly
  - Others focus on hardware simulation
  - Work **individually**
- 
- **Use the grading scripts!**

# Late Days? Makeup?

---

- **No late days**

Sorry, the paperwork is too much!

- Emergencies

- Contact the dean of students to get the excuse
- Email me, I'll be happy to work with you
- But we drop some assignments

# Regrade Requests

---

- Regrade requests due **7** days after grades are announced to you
  - Later than that, we generally don't even consider them
  - Use Gradescope's "Regrade Request" feature
  - If you ask for a regrade and got a replied, but you still want me to check your request, email me or attend my office hours

# Grading Scale

---

- Standard 90/80/70/60 scale
  - Might lower the bar, never raise it
  - Extra credit
    - In-class participation

# Contacting Us

---

- For general questions use Discord
  - Other students probably want to know the same thing!
- For questions about your code
  - Email us or DM TAs
- For grading questions
  - Email me
- If you have a private matter
  - Email me

# Academic Integrity

---

**YOUR WORK MUST  
BE YOUR OWN**

# Academic Integrity

---

- OK to discuss problems *“in broad terms”*
  - “What is Diana asking us to do?”
- **NOT OK** to discuss solutions
  - “How did you solve the problem?”
- **NOT OK** to look at others' code or share your code

# Academic Integrity

---

- Always OK to talk to TAs & Instructor
  - Ask anything!
  - We might say “can't tell you”
  - We'll never penalize you for a question
- Discord a good place for general questions
  - Clarification of assignments

# Academic Integrity

---

## Penalties:

- Minimum:
  - **negative** 100% on the assignment
    - Better to skip the assignment than cheat!
  - Report to the Dean of Students
- Can be more!

# Academic Integrity

---

## Hard Coding:

- Stuck on a problem? Tempted to just “solve the testcases?” **Don't!**
- Secret testcases
- Academic Code of Integrity

# Classroom behavior

- Treat other respectfully
- Do not be noisy or disruptive during lecture
- Use your laptop but only for note-taking and following along with lecture, coding, In-class Activities
- You may not chat, game, facebook, netflix, etc

# Introduce yourselves!

1. Go around your table and introduce yourselves to everyone
  - a. Say your name/major/year
2. Come up with a name for your group
  1. Find one thing you all have in common

## Question 1

1. **Submit** the answers to the following questions to Gradescope as a group (1 person of the group submits)
  1. Group name
  2. What assignments are due on Monday?
  3. What assignments are due on Wednesday?

# Course Overview

---

# What is a computer?

# Which of these is (or have) a computer?

**A**

**B**

**C**

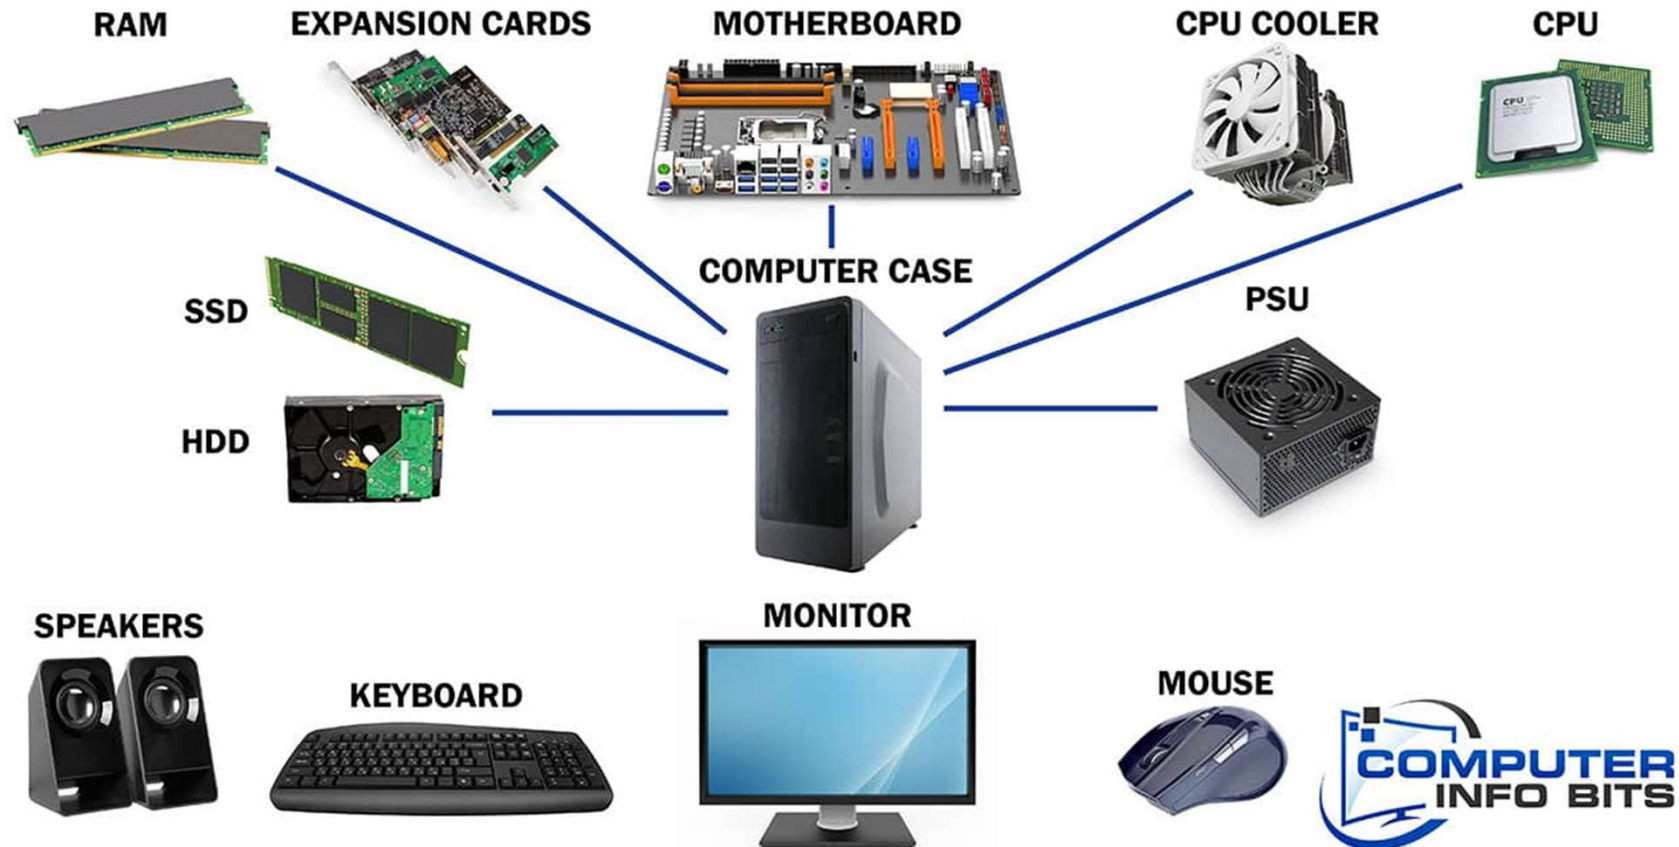

**D**

**E**

ALL OF THE ABOVE

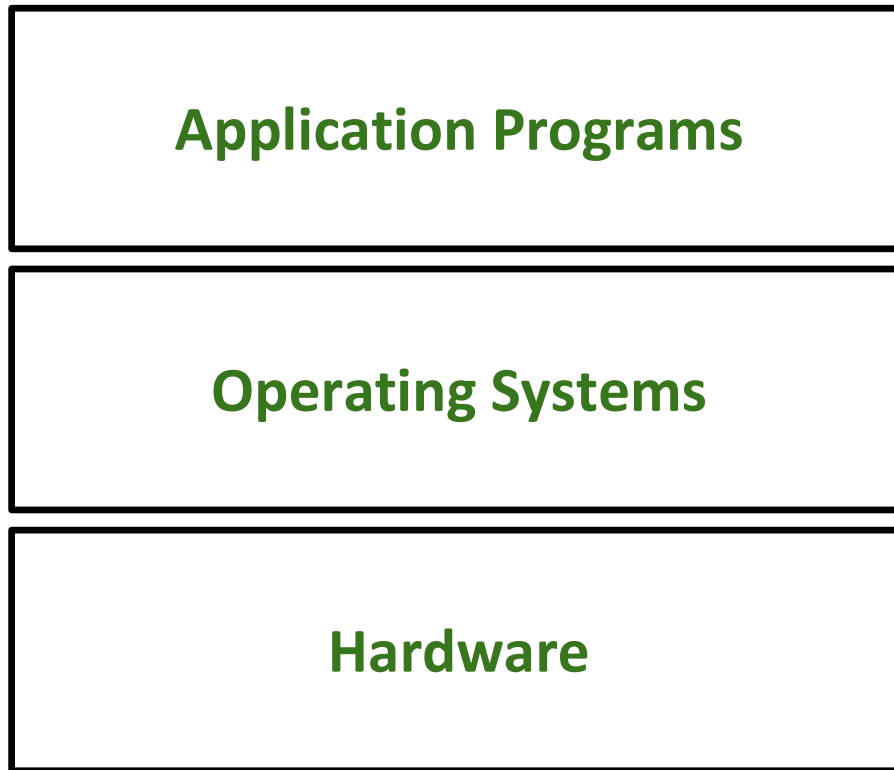

# PARTS OF A COMPUTER

## Question 2

1. Explain using a drawing on your whiteboards  
How do computers work?
1. Take a picture of your drawing and upload it to Gradescope

# How does a program run?

# Example

**Application Programs**

**Google Chrome**

**Operating Systems**

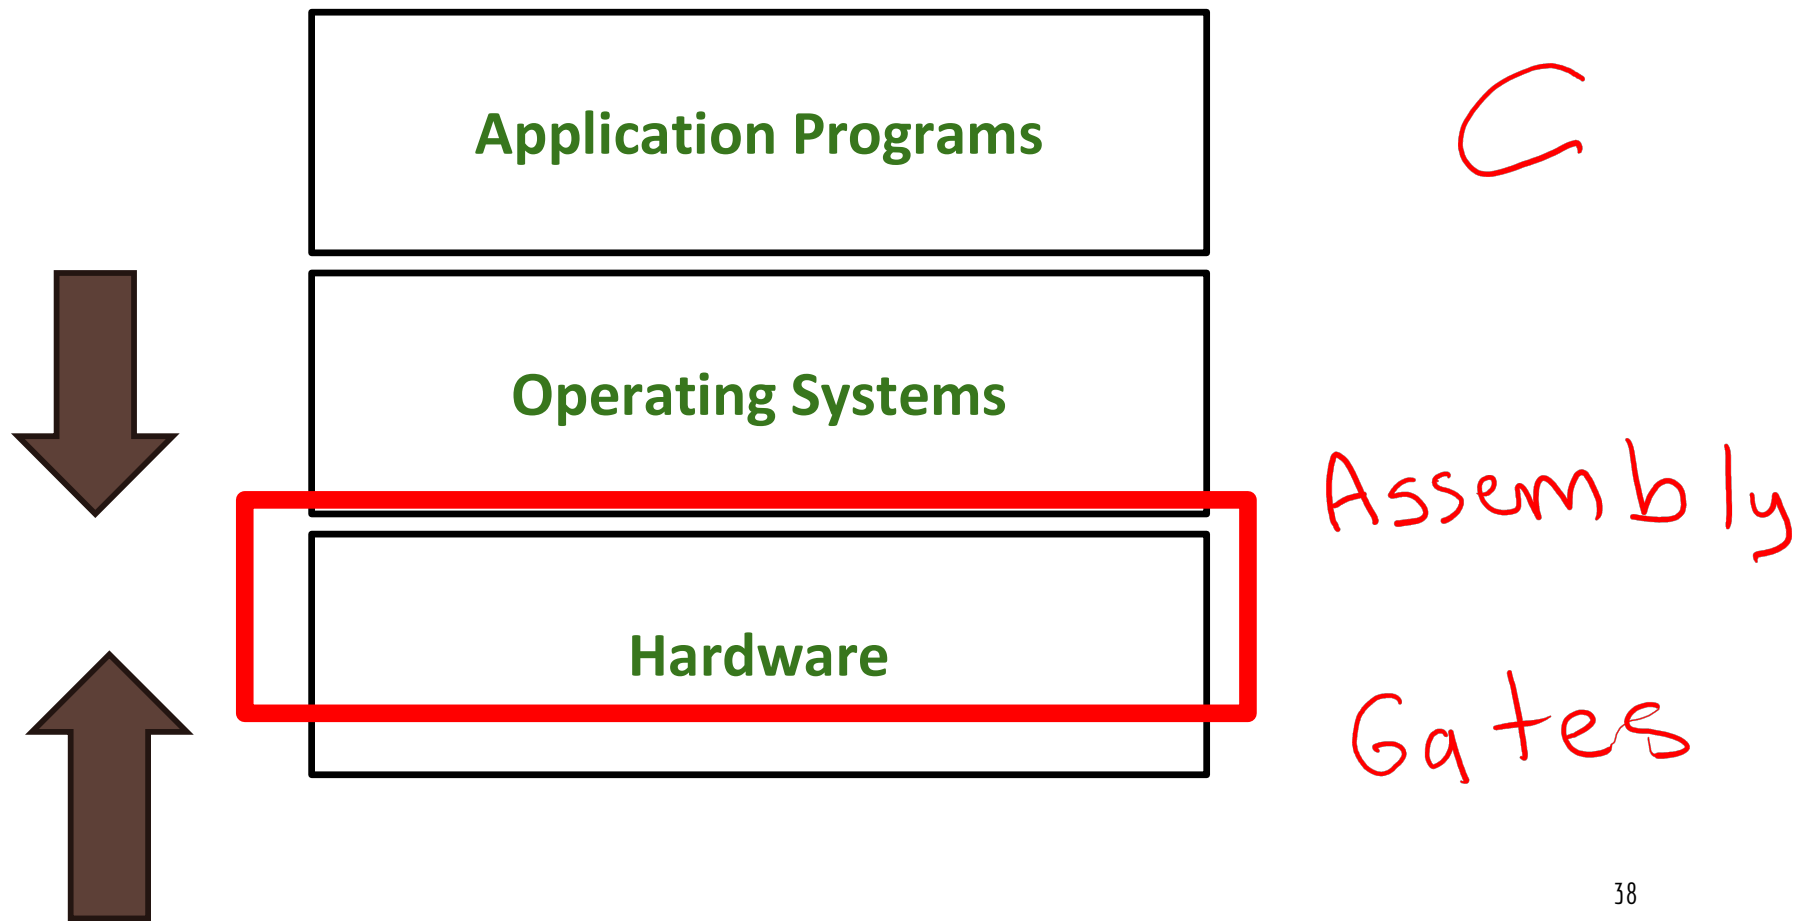

**Ubuntu**

**Hardware**

**AMD x86-64**

In this class

# How computers work?

---

# Electricity

**ON / OFF = bit**

Everything in the computer is Voltage or Not Voltage (on/off) (1/0) (true/false)

# In the computer everything is ones or zeros (binary)

- Numbers
- Strings
- Images
- Videos
- VR games
- Files
- Programs
- Operative Systems
- Compilers
- everything....

Let's store a  
number in a  
computer

---

# How can humans represent numbers?

Eastern Arabic numerals	10	. ١ ٢ ٣ ٤ ٥ ٦ ٧ ٨ ٩	8th Century																																																												
Vietnamese numerals (Chữ Nôm)	10	𠄎 𠄑 𠄒 𠄓 𠄔 𠄕 𠄖 𠄗 𠄘 𠄙	<9th Century																																																												
Western Arabic numerals	10	0 1 2 3 4 5 6 7 8 9	9th Century																																																												
Glagolitic numerals	10	ⱸ ⱹ ⱺ ⱻ ⱼ ⱽ Ȿ Ɀ ...	9th Century																																																												
Cyrillic numerals	10	а в г д е з и ѳ і ...	10th Century																																																												
Rumi numerals	10	ﻝ ﻛ ﺎ ﺏ ﻉ ﻊ ﻃ ﺪ	10th Century																																																												
Burmese numerals	10	၀ ၁ ၂ ၃ ၄ ၅ ၆ ၇ ၈ ၉	11th Century <sup>[10]</sup>																																																												
Tangut numerals	10	𐞀 𐞁 𐞂 𐞃 𐞄 𐞅 𐞆 𐞇 𐞈 𐞉	11th Century (1036)																																																												
Cistercian numerals	10	 <small>1 20 300 4000 5555 6789 9394</small>	13th Century																																																												
Maya numerals	5&20		<15th Century																																																												
Muisca numerals	20	<table border="1"> <thead> <tr> <th></th> <th>ATA</th> <th>BOSA</th> <th>MICA</th> <th>MURICA</th> <th>BRICA</th> <th>TA</th> <th>CHURKCA</th> <th>SHUSA</th> <th>ACA</th> <th>URCHICA</th> <th>GETA</th> </tr> </thead> <tbody> <tr> <td>Acosta</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>Humboldt</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>Zerda</td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td>1</td> <td>2</td> <td>3</td> <td>4</td> <td>5</td> <td>6</td> <td>7</td> <td>8</td> <td>9</td> <td>10</td> <td>20</td> </tr> </tbody> </table>		ATA	BOSA	MICA	MURICA	BRICA	TA	CHURKCA	SHUSA	ACA	URCHICA	GETA	Acosta												Humboldt												Zerda													1	2	3	4	5	6	7	8	9	10	20	<15th Century
	ATA	BOSA	MICA	MURICA	BRICA	TA	CHURKCA	SHUSA	ACA	URCHICA	GETA																																																				
Acosta																																																															
Humboldt																																																															
Zerda																																																															
	1	2	3	4	5	6	7	8	9	10	20																																																				
Korean numerals (Hangul)	10	영 일 이 삼 사 오 육 칠 팔 구	15th Century (1443)																																																												
Aztec numerals	20		16th Century																																																												
Sinhala numerals	10		<18th Century																																																												
Pentadic runes	10		19th Century																																																												

# We use western Arabic numerals

- decimal system (base 10)
- Use digits 0 – 9
- Each position changes the value by a multiple of 10.
- $132 = 1 \times 100 + 3 \times 10 + 2 \times 1$

How many dogs do you see in this picture?

write your answer in **decimal** system using 3 decimal places

0	0	6
---	---	---

3 decimal places

# Number Systems

---

- Base-10 uses powers of 10 for each column

942 is:

# Answer in your whiteboard

---

Let's say you are receiving a price of \$12345, but you have to change one of these five digits to zero.

Which digit would you change to maximize your price?

5 decimal places (aka 5 digits)

# Range of Values

---

- Three digit number:

Hundreds	Tens	Ones
9	9	9
$10^2$	$10^1$	$10^0$
$9*10^2$	$9*10$	$9*10^0$

- Max value for base 10:  $999 = 10^3 - 1$
- Max value for any base:  $b^k - 1$ 
  - Base  $b$ , with  $k$  digits

# Addition

---

- To add:
  - Add each column, from right to left
  - If answer is too large (2 digits), carry to next column

$$\begin{array}{r} 1 \quad \quad 1 \\ \quad 9 \quad 4 \quad 2 \\ + \quad 2 \quad 4 \quad 9 \\ \hline 1 \quad 1 \quad 9 \quad 1 \end{array}$$

# Question 3 on Gradescope

---

- How much do you know about the binary system?

**There are 10 types of  
people in the world:  
those who understand  
binary, and those who  
don't.**

# Question 4: Binary Addition

---

0 0  
1 1  
2 = 1 0  
3 → ↓ ↓  
1 0 0

$$\begin{array}{r} \phantom{0} \phantom{0} \phantom{1} \phantom{0} \phantom{1} \phantom{0} \phantom{1} \phantom{0} \phantom{1} \phantom{0} \\ \phantom{0} \phantom{0} \phantom{1} \phantom{0} \phantom{1} \phantom{0} \phantom{1} \phantom{0} \phantom{1} \phantom{0} \\ + \phantom{0} \phantom{0} \phantom{0} \phantom{1} \phantom{1} \phantom{1} \phantom{1} \phantom{1} \phantom{1} \\ \hline 0 \phantom{1} 0 \phantom{0} 0 \phantom{1} 0 \phantom{0} 0 \phantom{1} \phantom{0} \phantom{1} \end{array}$$

## Group Exercise:

- Add using binary (watch for carries)
- Convert both numbers to decimal
- Convert answer to decimal
- Check

# Number Systems

---

- Base-2 uses powers of 2 for each column

101 is:

# Storing numbers in a computer

---

# Storing binary numbers

---

- Why Binary?

- Simple electrical implementation

Max Voltage = 1      Min Voltage = 0

- *bit*                      A binary digit (one wire)
- *nibble*                  4 bits
- *byte*                      8 bits
- *half-word*              \*16 bits (\*defined by the system)
- *word*                      \*32 bits (\*defined by the system)

# A Byte

---

- Binary: Each column is worth a power-of-2

				8's	4's	2's	1's				
				$2^3$	$2^2$	$2^1$	$2^0$				
1	0	1	0	1	0	1	1				
				8	+	0	+	2	+	1	=
											$1_{te}$
0	2										

- Max value in a byte:  $2^8 - 1 = 255_{ten}$

# A Byte

---

- Binary: Each column is worth a power-of-2

128's	64's	32's	16's	8's	4's	2's	1's								
$2^7$	$2^6$	$2^5$	$2^4$	$2^3$	$2^2$	$2^1$	$2^0$								
1	0	1	0	1	0	1	1								
128	+		+	+	0	+	8	+	0	+	2	+	1	=	
		3													$17^n$
	0	2													$1_{te}$

- Max value in a byte:  $2^8 - 1 = 255$   
*ten*

How many dogs do you see in this picture?  
write your answer in a byte

Reading and writing binary is  
difficult for humans

# Hex and Octal

---

- Hexadecimal (base 16) and octal (base 8) are **shorthand for binary**

- 1 octal digit = 3 bits
- 1 hex digit = 4 bits

Binary	Octal
000	0
001	1
010	2
011	3
100	4
101	5
110	6
111	7

# Octal

---

- Counting (and adding) works like any other base:

Octal: 65, 66, 67, 70, 71, 72 ...  
75, 76, **????**

# Converting to/from Octal

---

- Group bits into packs of 3 (**starting at the right**)
- Convert each group to octal

## Convert to Octal:

110111<sub>2</sub>

1000\_0000<sub>2</sub>

(byte)

1010\_1010\_1110\_0111<sub>2</sub>

(half-word)

# Converting to/from Octal

---

- Group bits into packs of 3 (**starting at the right**)
- Convert each group to octal

## Convert to Octal:

<b>110</b> 111 <sub>2</sub>	67 <sub>8</sub>
10 <b>00_0</b> 000 <sub>2</sub>	200 <sub>8</sub>
<b>1</b> 010_ <b>101</b> 0_11 <b>10_0</b> 111 <sub>2</sub>	125347 <sub>8</sub>

- Unfortunately, octal digits don't line up with bytes!

# Hexadecimal

---

- Base 16: digits 0-9, then a-f (or A-F)

Binary	Hex	Binary	Hex
0000	0	1000	8
0001	1	1001	9
0010	2	1010	a
0011	3	1011	b
0100	4	1100	c
0101	5	1101	d
0110	6	1110	e
0111	7	1111	f

# Why Hexadecimal?

---

- Dense, easy to type & read
- 2 hex digits = 1 byte
  
- In C (and thus, in many languages), hex constants start with `0x`

# Why Hexadecimal?

---

- Dense, easy to type & read
- 2 hex digits = 1 byte

- **Great constants**

`0xdeadbeef`

`0xbaadf00d`

`0x0000000ff1ce` (MS Office)

`0xc00010ff` (iOS error - overheat)

`face:b00c` (part of an IPv6 addr)<sub>75</sub>

# Decimal to/from Octal, Hex

---

- Possible to go direct, but annoying
- Easier: go to binary, then to octal/hex

## **Class Exercise:**

Convert the following decimal numbers to octal and hex:

17

127

1041

65534

# Decimal to/from Octal, Hex

---

- Possible to go direct, but annoying
- Easier: go to binary, then to octal/hex

## Class Exercise:

Convert the following numbers to octal and hex:

17	$1\_0001_2$	$21_8$	$11_{16}$
127	$111\_1111_2$	$177_8$	$7f_{16}$
1041	$100\_0001\_0001_2$	$2021_8$	$411_{16}$
65534	$1111\_1111\_1111\_1110_2$	$177776_8$	$fffe_{16}$

\_\_\_\_\_
